

The 300mm telephoto lens is designed to bring out the telephoto effects more dynamically. Its high ratio of magnification enables one to span long distances. Because of its narrow angle of view and extremely restricted depth-of-field, the use of a tripod is essential when shooting with this lens. Ideal for sports and landscape photography, as well as for photographing animals in their natural surroundings.

300 mm

AUTO YASHINON f/5.6 300 mm TELEPHOTO LENS

- 5 elements in 4 groups; fully automatic diaphragm; angle of view $8^{\circ}10'$; Praktica mount; minimum aperture f/22; minimum focus 4.5 m; filter size 58 mm; weight 780 grams.
